

introduction

The proposed BOP COMPLEX Building is at 15-Race Course, China Chowk, Lahore. It is bound by Jilani Park on West Side, North and South by Residential & Commercial Buildings and on the East Side that is the Facade of the building is China Chowk towards Mall Road and Jail Road, Lahore, Pakistan.

This project was a competition project which I was directly involved in designing, I worked on the elevations, form of the building as well as the 3d renders. I also documented its process and it was included in our final presentation.

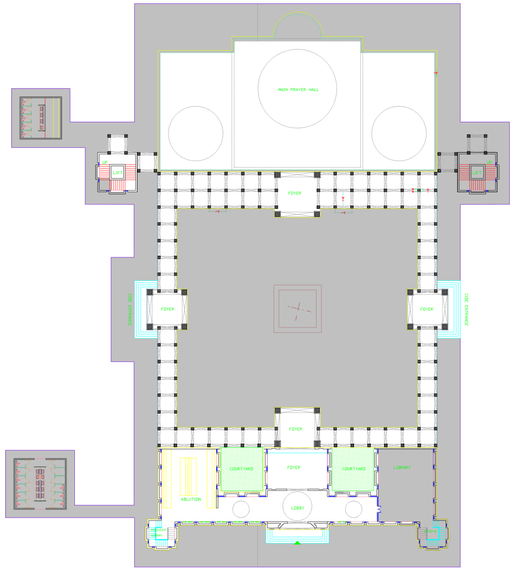

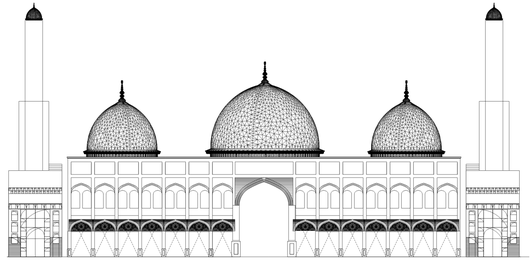

introduction

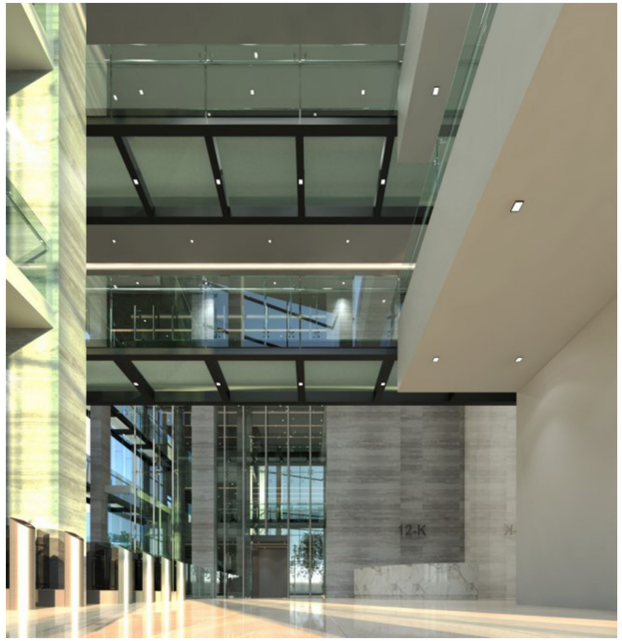

A mosque designed in Ghandara district, Punjab rich with characteristics of the old Ghandara civilisation. The mosque is designed to host 6000 people. The mosqu is located on top of a hill which views from all sides. I was directly involved in the planning and elevation designing and rendering of the mosque under the supervision of my firm's Group Cep and this project's lead Architect Ahmed Mukhtar. This project is now advancing into construction stage.

plan & elevations

introduction

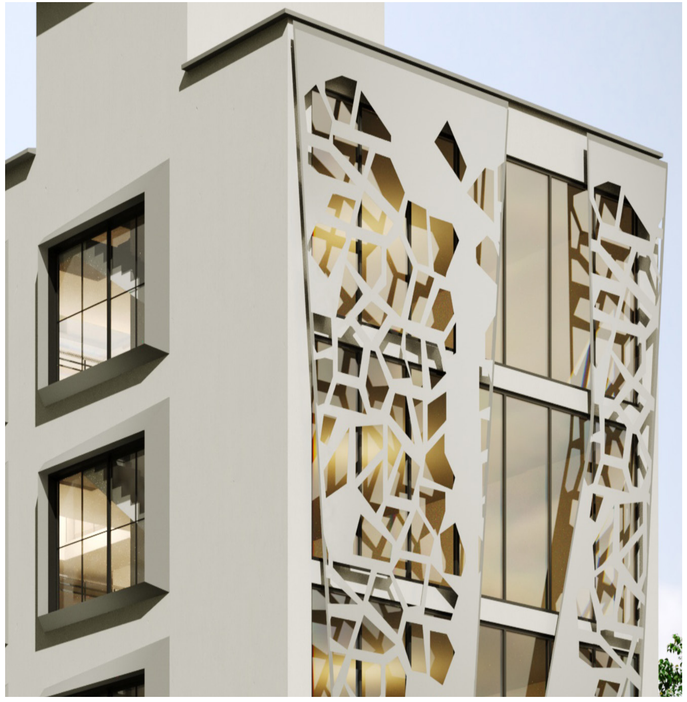

Bank Al-Habib a renowned bank in Pakistan was the first project I worked on at AL-IMAM. I was tasked with the modelling of the building on Revit as well as assisting with the design of the building. My task was to study the construction and design drawings and look for any discrpences in regard to MEP ducting and ensure that there were no clashes in the architectural drawings and MEP drawings through my model. In this project I learnt how to read construction drawings and refined my modelling skills while designing the 14 story building. This project is now in construction phase.

introduction

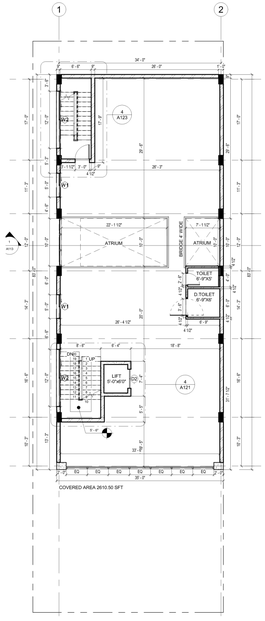

Another project I designed here at my firm was a multi-purpose commercial plaza. Even though the project was quite straightfoward it gave me the oppertunity to test out different concepts including the skin of the facade and window shades which was something new and had not been seen in pakistan before. This project is now in construction phase.
