projects

vertical farming center

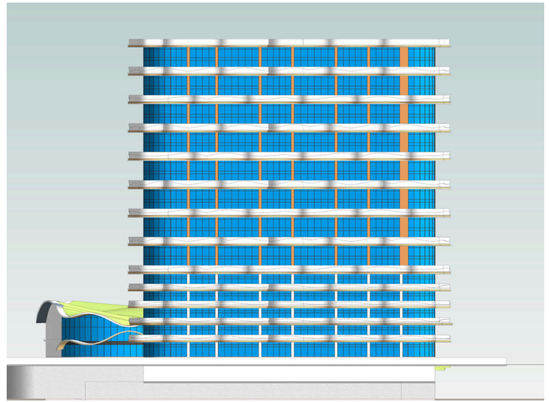

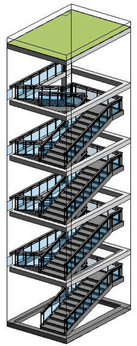

introduction

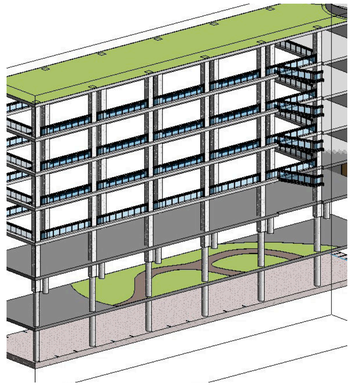

This was a freelance project I did for a working professional who wanted a space designed for farming different from the norms thus I decided to propose a vertical farming center focusing on organic forms and sustainability as its foremost focus. It consists of spaces for farming, retail, with a communal garden. The stairs spaces were designed in a way that people can interact with the plants, with a curved escalator surrounding the vertical garden. It was a challenging project in terms of modelling and designing the facade and interior spaces but all the more exciting and fun.
